Ones digit: 0
Show the (W)hole number
Show the (O)nes digit
Show the (T)ens digit
Show the (H)undreds digit
(Q)uit
Enter your choice:
```

Code wasn't working properly because the private variable can't have the same name as the parameter variable so I changed the parameter variable name

```
private int num;

//Constructor method
public Num(int num) {
    num = num;
}
```

Before ^^

```
private int num;

//Constructor method
public Num(int number) {
    num = number;
}
```

After^^
